

2025

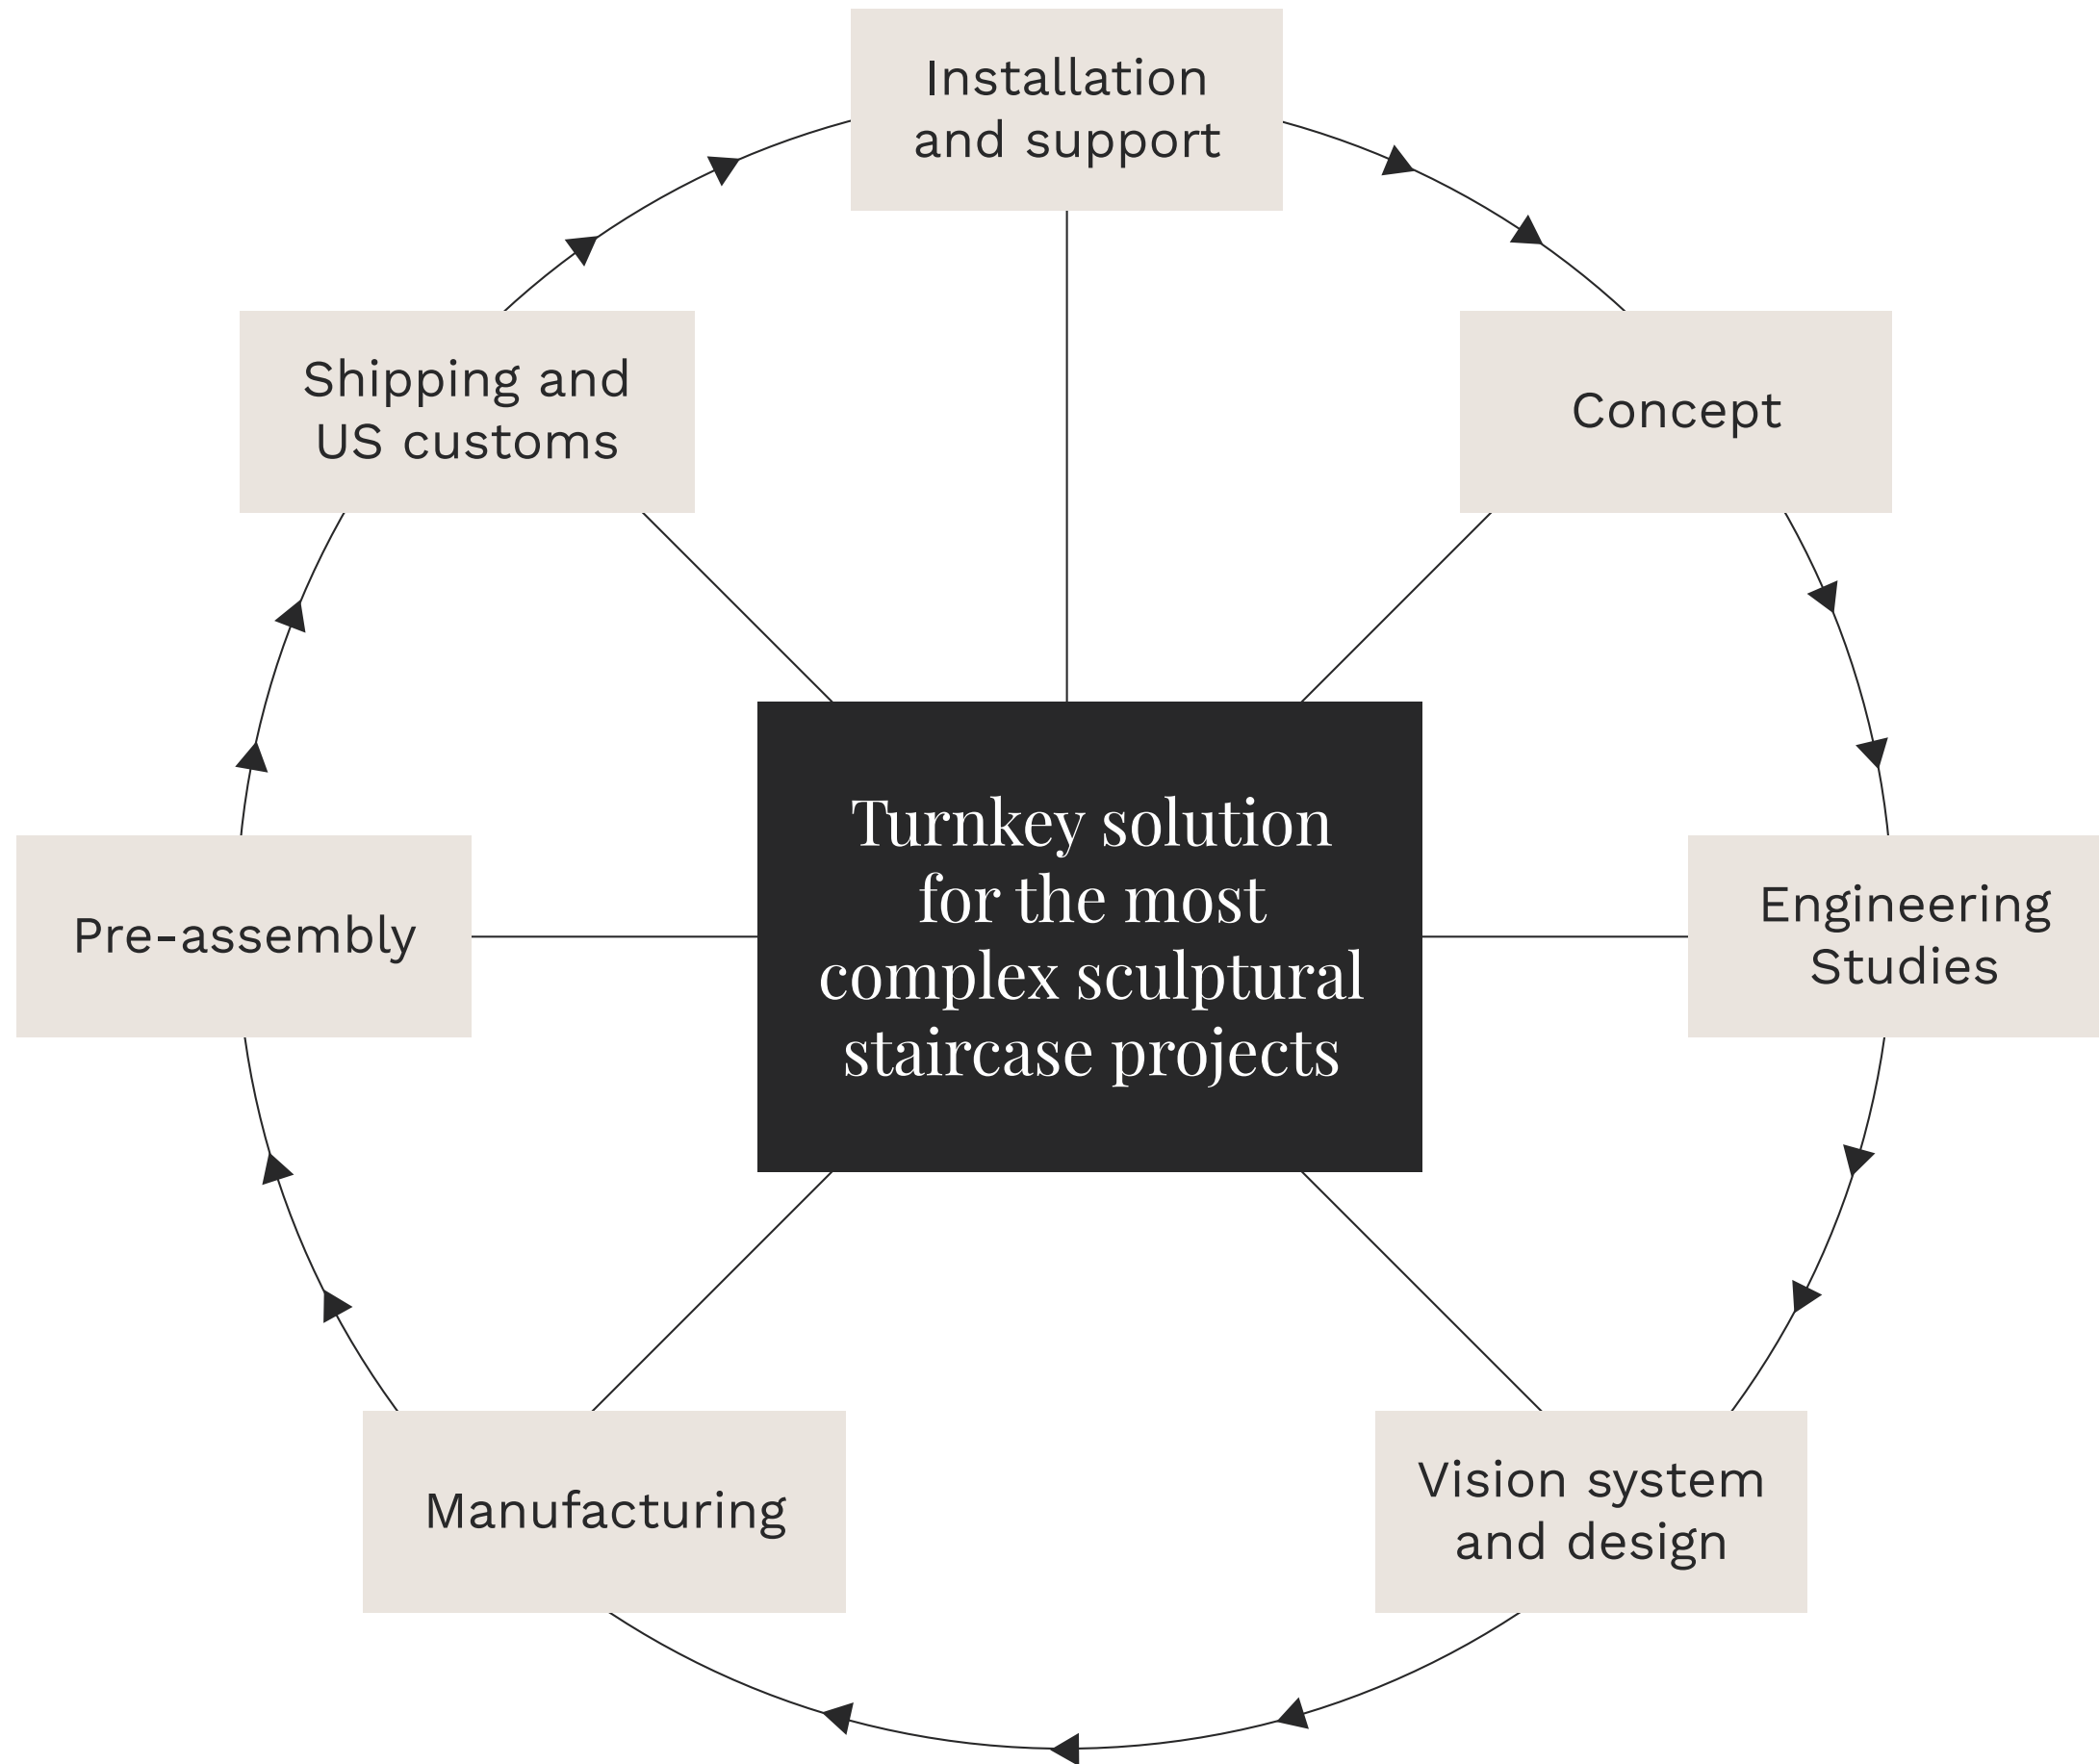

Founded in 1914, Marretti Italy is an *award-winning, product-led* designer and manufacturer of *sculptural staircases* for hospitality and commercial spaces worldwide.

Our team is engineering-led using leading-edge technology to create *unique & innovative* designs with handcrafted artisanship.

We work in close collaboration with architects, designers, developers, and general contractors. Our process is a turnkey solution from concept to feasibility engineering study, system design and manufacturing as well as expert installations and customer support service.

Marretti Italy operates over **54,000 square feet** of state-of-the-art manufacturing facilities across two locations in Italy
Florence and Modena

These manufacturing plants are equipped to work with a variety of materials, including wood, stainless steel, glass, marble, and more. The advanced manufacturing process features a robotic processing center (CNC) for precision work, as well as dedicated departments for polishing, packaging, and assembly.

Production

Triple Loop Helix Staircase with Copper Finish

The Triple Loop Helix Staircase is the latest Marretti creation, designed to become a monumental centerpiece for luxury hospitality environments.

Its fluid, sculptural form captivates attention, while the rich copper finish adds warmth and sophistication to any space.

This design masterfully juxtaposes sleek marble steps with the bold, copper-clad guard structure, creating a striking visual dialogue between texture and form.

01

02

Double Loop Bronze-Cladding Helix Staircase

This helix staircase features a 6ft-wide opening, revealing the smooth texture of its first three marble steps from afar.

The 3ft tall boxed structure is finished with bronze-cladding, transforming the staircase into a sculptural showstopper within the hospitality space.

LED lights can be incorporated in the handrails, which can be recessed or visible.

Glossy RAL Color Helix Staircase

This helix staircase features 3 1/8" thick boxed stringers which provide a robust foundation, complemented by handrails crafted from circular tubing with a 1 1/2" diameter, coated in a layer of oxidized bronze. The steps and risers find their support in press-folded iron sheets, arranged in a ribbon-like structure, creating a visually seamless ascent.

A distinctive feature of this staircase is its continuous slide at the lower part, elegantly reconnecting the two lateral structures. The entire structure is unified into

a monolithic block, skillfully concealing any visible fastenings or joints. The glossy red resin, applied on-site by a specialized artisan, further enhances the staircase's aesthetic appeal.

Versatility is a key aspect of this design, as the structure can be tailored to various preferences. Options include polished or satin stainless steel, gold-plating, or a coating of oxidized bronze. The steps offer a choice between different wood essences like beech, oak, walnut, or teak.

03

Helix Staircase in Blackened Steel Roll

04

The interior structure of this helix staircase is crafted from a 2-inch thick boxed system of Hot Rolled Blackened Steel, offering a bold, robust aesthetic.

The exterior is finished with 4-inch thick bronzed brass.

The recessed handrail, integrated into the structure, enhances its sleek profile, with LED lighting placed both within the steps and along the handrail for a subtle, inviting glow.

Matte RAL Color Helix Staircase

Engineered with a load capacity of 102 pounds per square foot, this self-supporting steel structure is available in any RAL color, offering endless customization options to suit any design vision.

With a railing built to withstand forces of up to 440 pounds, the staircase ensures durability and safety in demanding environments. For added elegance and safety, LED lighting can be integrated into the steps. The steps themselves are available in Serena, Limestone, Gold Calacatta Marble, and White Carrara Marble.

24 Karat Gold-Plated Staircase

This helical staircase has a double lateral structure made of polished stainless steel boxed stringers, covered in 24K gold with steps made of 3 feet wide and 2 inches thick grey marble.

The steps are supported by polished stainless steel and are equipped with LED lighting both on the steps and inside the groove of the handrail carved into the structure's thickness.

The staircase has a single-piece design that allows for fastening only at the start and end points.

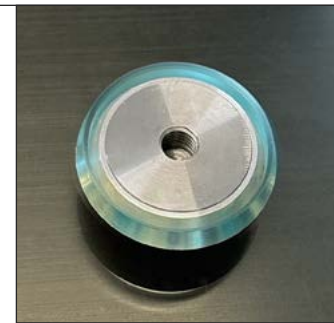

Custom Made Tempered Glass & Stainless-Steel Staircase

This custom glass staircase is a fusion of transparency and strength. Built with a brushed-finish AISI 304 stainless steel structure, this staircase features extra-clear tempered glass steps that are 7 feet wide and 2 inches thick. The top surface of each step is treated with an anti-slip coating. The innovative design eliminates the need for drilled holes, with hooks recessed directly into

the glass, ensuring a smooth, uninterrupted surface.

The railing, also crafted from 1.5-inch thick extra-clear tempered glass, adds to the sleek and minimalist aesthetic. Each glass component is laminated with SGP plastic (SentryGlas® by Dupont) for enhanced strength and durability.

Patented stainless steel fitting, recessed into the glass

Solid top glass surface without holes
